

highly purified Biological Buffers

SRL is known best for some of our popular and routinely used biological buffers due to their high purity, solution clarity, quality consistency thus making them more favorable in a wide variety of applications such as Electrophoresis, Enzyme Assays, Molecular biology studies, Biochemistry, Protein Isolation, Vaccine production, drug formulation, etc..

Tris Buffer & Salts

- Tris is an excellent biochemical and biological buffer for all molecular biology applications.
- It shows high solubility in aqueous systems and frequently used as an electrophoresis buffer
- Widely used in pharmaceutical application as a supporting material.
- Effective pH range: 7.0 - 9.0

HEPES Buffer & Salts

- HEPES is a zwitterionic buffering agent.
- Wide variety of applications in cell culture, media formulations, protein assays, etc.
- Better in maintaining physiological pH despite changes in carbon dioxide concentration (produced by cellular respiration) when compared to bicarbonate buffers.
- Effective pH range: 6.8 - 8.2

MOPS Buffer & Salts

- MOPS is a zwitterionic agent.
- Generally used in cell culture, protein studies and as an electrophoresis buffer.
- Effective pH range: 6.5 - 7.9

MES Buffer

- MES is a zwitterionic buffer.
- It has maximum water solubility and minimum solubility in all other solvents.
- Chemically and enzymatically stable.
- Minimal absorption in visible or UV spectral range.
- Effective pH range: 5.5 - 6.7

CHAPS Buffer

- CHAPS is a non-denaturing zwitterionic detergent.
- Generally used for protein solubilization and protein purification especially useful in purifying membrane proteins.
- Low light absorbance in the ultraviolet region of the electromagnetic spectrum, thus useful for monitoring ongoing chemical reactions or protein-protein binding with UV spectroscopy.
- Effective pH range: 4.0 - 7.0

Biological Buffers are used to prepare exclusive solutions that aid in various biochemical processes, wherein a significant change in pH can lead to harmful reaction in molecular structure, biological activity and functions.

Buffer systems are aqueous systems that resist changes in pH, as an acid or base is added. They keep the pH of the solution constant by taking up protons which are released during reactions, or by releasing protons when they are consumed by the reactions.

SRL is renowned for its extensive wide range of Biological Buffers for various applications.

Key factors of SRL's range of Biological Buffers:

- High purity range of buffers with purity >99% (by titration)
- Wide application in molecular and biochemical studies & industrial production
- Absence of Nuclease & Protease
- Low UV absorbance
- Ready availability and cost effective pack sizes

We also offer **Tris Buffer in USP Grade with complete documentation.**

For commercial & pharma applications we also provide all products in Bulk Packs.
